

# Red Hat Satellite

6.5 Update

---

Paul Scolieri  
Solutions Architect

**Red Hat Satellite is a scalable platform to manage patching, provisioning, and subscription management of your Red Hat infrastructure, regardless of where it is running.**

# Introduction to Satellite

# Content Management

**Content Repository** any type of content made available to any host

**Curation** of content prior to distribution

**Distribution** of content as close as possible to the end point.

# Patch Management

**Report** on hosts that need updates, fixes, or enhancements

**Group** homogeneous systems so that you can easily work with them

**Respond** quickly to patching requirements using scalable automation

# Provisioning Management

**Provision** to bare metal, virtual, private, and public clouds

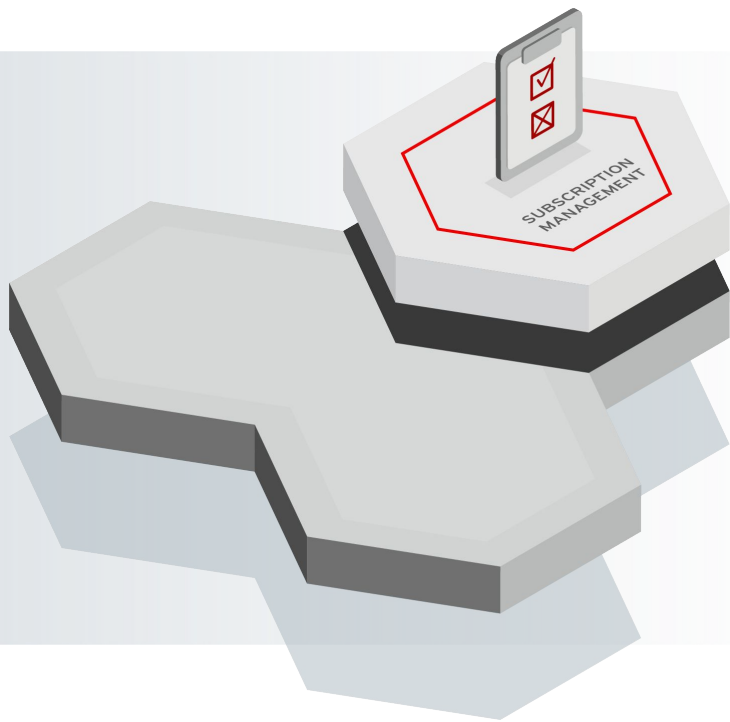

**Import** non-provisioned hosts

**Automate** using Ansible roles to perform post-provisioning steps

# Subscription Management

**Centrally manage** subscription usage

**Maintain** accurate inventory and utilization information

**Report** on subscription consumption

# Additional Satellite Capabilities

**Configuration Management** using Ansible or Puppet

**Automation** through integration with Ansible Tower

**Compliance** using OpenSCAP policies

**Standard Operating Environment** hosts are the same across your environment

**Reliable and Resilient** Using Red Hat Insights

**Secure** your systems are patched, up to date, and compliant with security policies

**Confidence** in your subscription utilization

# How to Buy Satellite

# What do I get for Satellite with Smart Management?

Quantity 50 of MCT3718 - Satellite Infrastructure Subscription

Enabling you to Scale out your Satellite deployment to best suit your needs.

- Need a Satellite for Test/Dev?
- Need a Capsule in the cloud?
- Need load-balanced Capsules?
- Need an air-gapped synchronization host?

No Problem.

# Red Hat Insights

Now included with all Red Hat Enterprise Linux subscriptions

# Red Hat Smart Management

Red Hat Satellite

+

Cloud management services for Red Hat Enterprise Linux

Vulnerability

Compliance

System comparison

# Management Flexibility

Offering Red Hat Management on-premises or in the cloud

## Red Hat Satellite

Full configuration control operating on premise

Addresses on-prem or disconnected environment

View hosts registered to the individual Satellite services

### Use cases:

Content management, patching, configuration, subscription management, provisioning

## Cloud Management Services

No requirements for resource set up and maintenance

Adopt new features faster with a software-as-a-service preference

Single view of all hosts across your RH infrastructure

### Use cases:

Vulnerability, Compliance, System Comparison

Smart Management Packaging gives access to both Satellite AND cloud management services

# How Satellite Works

Deployment Models

# Red Hat Satellite Components

## Satellite Server

- Multi-tenant
- On-premise repository management
- User and group role-based access control (RBAC)
- Powerful user interfaces (GUI, API & CLI)
- Export of content to other Satellite Servers

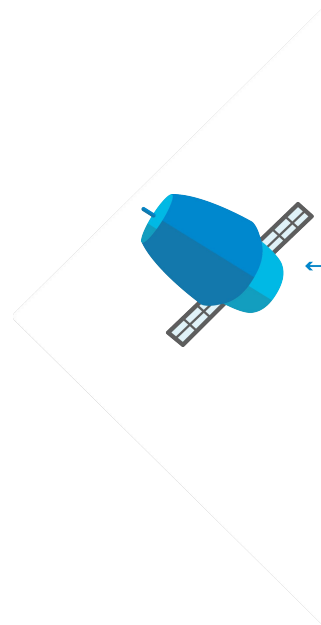

## Capsule Server

- Enables scaling of your Satellite environment
- Provides local content, provisioning, and integration services
- Discovers new physical & virtual machines

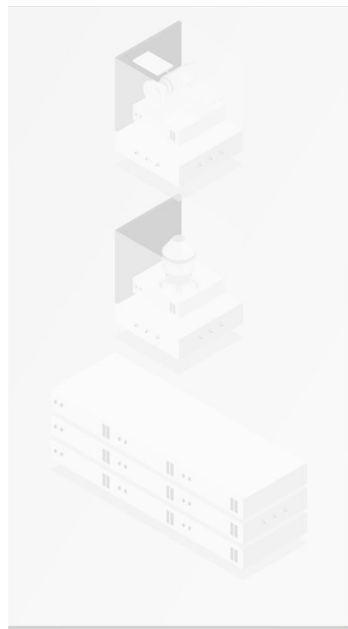

# Improve scalability and automation with Capsule Servers

- Ansible
- Puppet master
- Content mirror
- Provision, discover, configure
- Vulnerability scanner
- Enrollment in identity
- Remote execution
- SSH engine
- Power on/off

# Red Hat Satellite in 3 scenarios

# Red Hat Satellite Upgrade

# Red Hat Satellite Upgrade Information

## Satellite 6.x to 6.5

- Follow the Upgrading and Updating Red Hat Satellite Guide

## Satellite 5.x to 6.5

- Read the Transitioning Guide and FAQ to help plan the migration from Satellite 5 to Satellite 6
- Reach out to your account manager to discuss consulting options

Product docs page: [https://access.redhat.com/documentation/en-us/red\\_hat\\_satellite/](https://access.redhat.com/documentation/en-us/red_hat_satellite/)

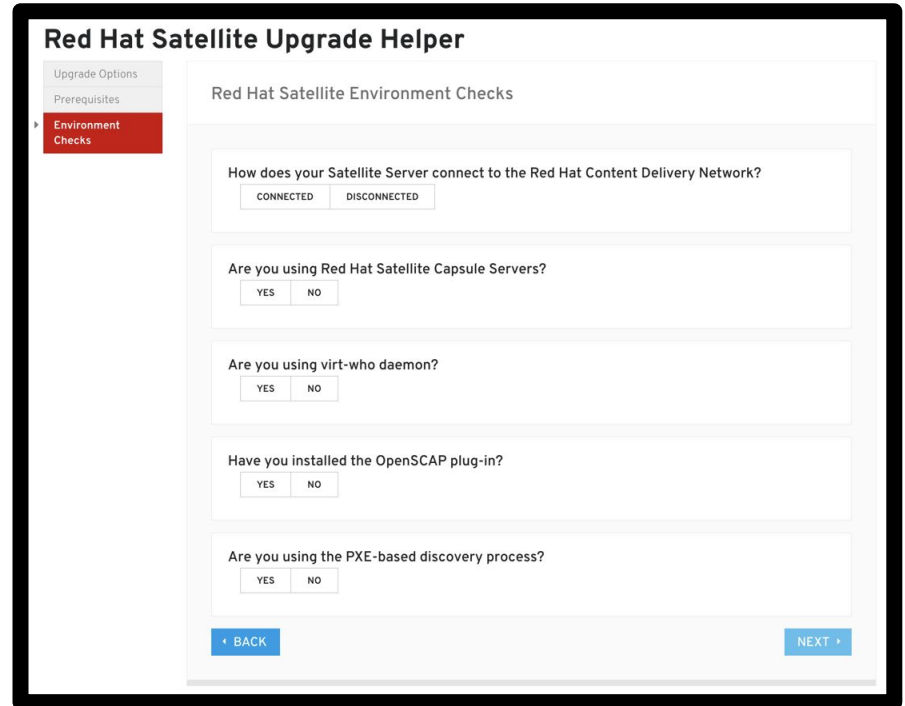

# Red Hat Satellite Upgrade Helper

<https://access.redhat.com/labsinfo/satelliteupgradehelper>

Tool designed to help you upgrade from:

- 6.0 to 6.1
- 6.1 to 6.2
- 6.2 to 6.3
- 6.3 to 6.4
- 6.4 to 6.5

Upgrade helper presents upgrade steps and includes extra steps to help prevent any known issues.

The screenshot displays the 'Red Hat Satellite Upgrade Helper' web interface. On the left, a navigation menu includes 'Upgrade Options', 'Prerequisites', and 'Environment Checks', with the latter being the active section. The main content area is titled 'Red Hat Satellite Environment Checks' and contains five sequential questions, each with radio button options:

- How does your Satellite Server connect to the Red Hat Content Delivery Network? (CONNECTED / DISCONNECTED)
- Are you using Red Hat Satellite Capsule Servers? (YES / NO)
- Are you using virt-who daemon? (YES / NO)
- Have you installed the OpenSCAP plug-in? (YES / NO)
- Are you using the PXE-based discovery process? (YES / NO)

At the bottom of the form, there are 'BACK' and 'NEXT' navigation buttons.

# Red Hat Satellite 6 Life-Cycle Dates

Satellite Version	General Availability	End of Full Support	End of Maintenance Support	End of Maintenance Support 2
6.0	September 10, 2014	August 12, 2015	July 27, 2016	February 21, 2018
6.1	August 12, 2015	July 27, 2016	February 21, 2018	October 30, 2018
6.2	July 27, 2016	February 21, 2018	October 30, 2018	May 31, 2019
6.3	February 21, 2018	October 30, 2018	May 31, 2019	Estimated Fall 2019
6.4	October 16, 2018	May 31, 2019	Estimated Fall 2019	Estimated Spring 2020
6.5	May 14, 2019	Estimated Fall 2019	Estimated Spring 2020	Estimated Fall 2020

Satellite 6.5 supports

Red Hat Enterprise Linux

8 hosts

# Red Hat Satellite 6.5

## System management for Red Hat Enterprise Linux 8 hosts

If you want to manage Red Hat Enterprise Linux 8 clients, you must be running Satellite 6.5.

### Patching

Patch Red Hat Enterprise Linux 8 hosts with Satellite

### Provisioning

Provision Red Hat Enterprise Linux 8 hosts with Satellite

### Application streams

Basic module visibility and management with Red Hat Enterprise Linux 8

### System purpose

State the intended use of a Red Hat Enterprise Linux 8 system

### System roles

Run system roles on Red Hat Enterprise Linux hosts

\*NOTE: Satellite and Capsules must be installed on a Red Hat Enterprise Linux 7 Host

**RED HAT ENTERPRISE LINUX 8 SYSTEM ROLES**

# Satellite and Red Hat Enterprise Linux 8

- Sat 6.5 supports RHEL 8 clients
- A future release will allow you to run Satellite on RHEL 8
  - Some new features will only work on RHEL 8
  - Eventually Satellite will only run on RHEL 8

What does the future hold  
for Satellite and RHEL 8?

# Security

Security changes in  
Satellite 6.5

# Security Enhancements

## FIPS Support and OpenSCAP Enhancements

### **Install Satellite on a FIPS Enabled RHEL 7 Host**

Satellite inherits the FIPS level of RHEL

### **OpenSCAP enhancements**

Show hosts that fail a certain OpenSCAP rule

### **Satellite Admin Role**

A new user type that can manage the Satellite infrastructure, create new organizations, but can't manage the hosts.

# Content Management

Content Management  
changes in Satellite 6.5

# Content Management

## Enhanced Architectural Flexibility

### Export Content Views

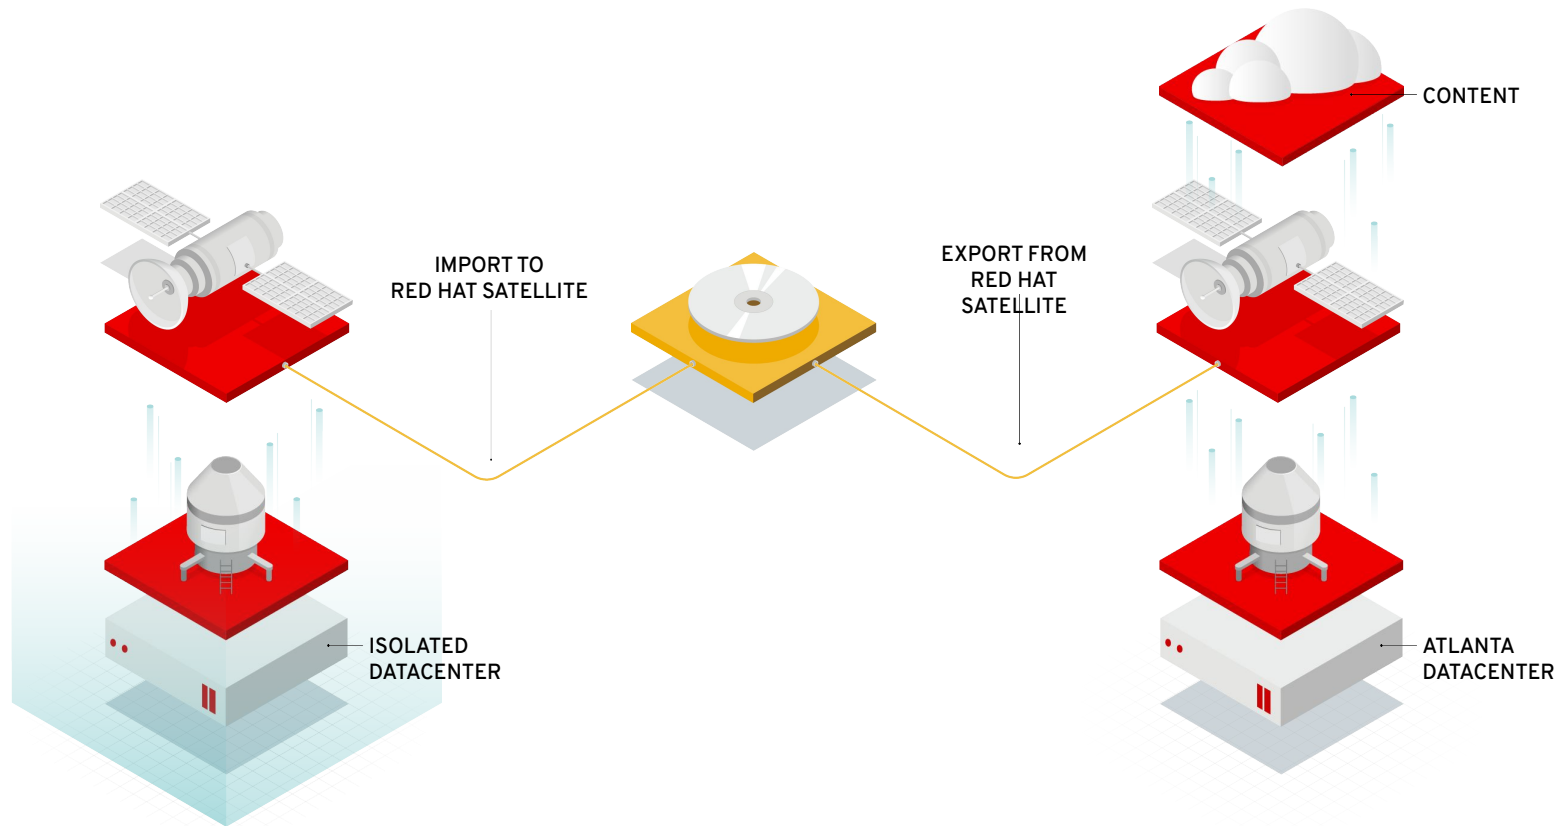

Export content from a Satellite and import them on a different Satellite

### Container Admin

Manage container images for use by end users

## RED HAT SATELLITE IN AN AIR GAPPED ENVIRONMENT

# Support

Supportability changes in  
Satellite 6.5

# Support

## Infoblox IPAM Support

Support for Infoblox IPAM

## Run Satellite or Capsules in major cloud providers

Customers who are using Cloud Access can now deploy Satellite or Capsules without a support exception on the following cloud providers:

- AWS
- Azure
- Google
- Alibaba
- IBM

To deploy Satellite/Capsule on other cloud providers still requires a support exception

Note this functionality is separate from provisioning of hosts which is only supported on AWS and Google.

# Reporting

All new reporting engine  
in Satellite 6.5

# Reporting Engine

## Reporting Engine

Pre-canned, customizable, and newly created reports

## Pre-canned reports

# Satellite & Ansible

## More info

How Satellite and Ansible  
work together

# SATELLITE AND ANSIBLE TOWER INTEGRATION

Documented best practices to help optimize use of both products

By integrating Red Hat Satellite with Red Hat Ansible® Tower, administrators can now perform the following functions:

## Dynamic inventory

Allows Ansible Tower to use Satellite as a dynamic inventory source.

## Provisioning callbacks

Allows systems provisioned via Satellite to “callback” to Ansible Tower so that playbook runs can happen post-provisioning.

# SATELLITE - ANSIBLE INTEGRATION

Basic Ansible capabilities are now part of Satellite

Satellite has integration with Ansible for the purposes of remote execution and desired state management

## Remote Execution

Run Ansible Playbooks inside of Satellite

## Deploy Insights using Ansible

Install Insights on all your hosts

## RHEL System Roles

Deploy RHEL System Roles to hosts managed by Satellite
